CASE STUDY · MOBILE APP · UX/UI

Zigo

Decode. Understand. Become. A behavioural analysis app that helps university students discover how they think and which path fits them.

STATUS	AUDIENCE	FOCUS	MY ROLE
Adopted by Alamein International University	University students	Behavioural analysis and personalised programmes	UX/UI design

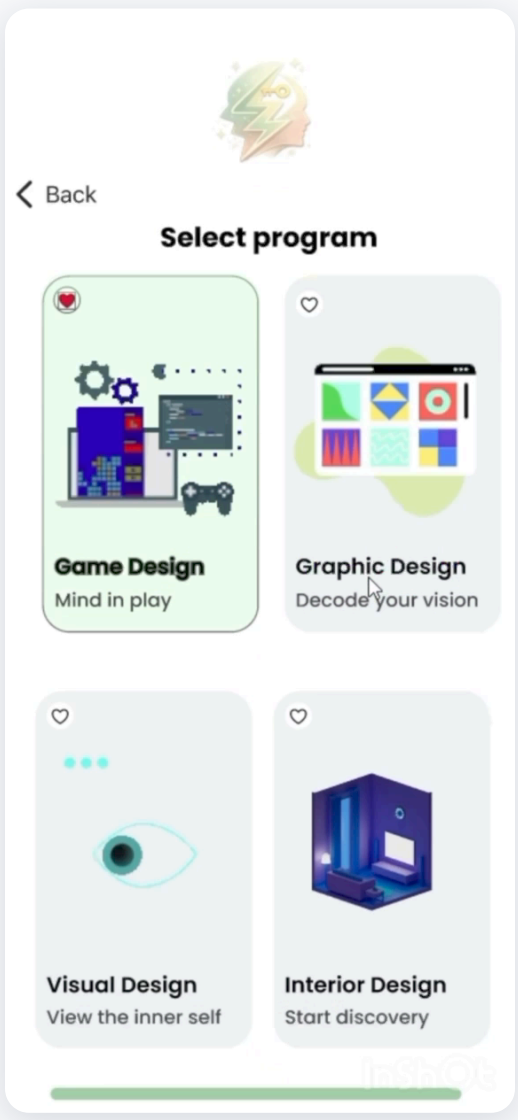

01 · OVERVIEW & PROBLEM STATEMENT

A smarter way to know yourself

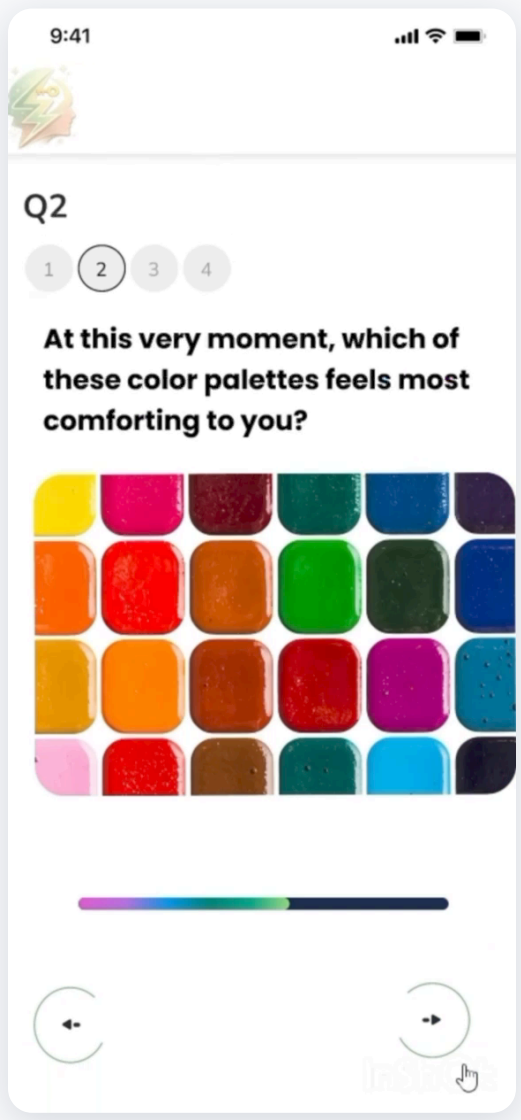

Zigo is a mobile app that helps university students understand their personality and thinking patterns, then points them to personalised programmes such as Game Design, Graphic Design, Visual Design and Interior Design. Students answer short, visual questions, or play a short game, and receive a personal creative persona.

The problem. University life is more than lectures and exams. Many students are still working out who they are and where they are going, and long, text-heavy questionnaires do little to help. Zigo turns self-discovery into a short, visual and friendly experience that gives students a clear picture of their strengths.

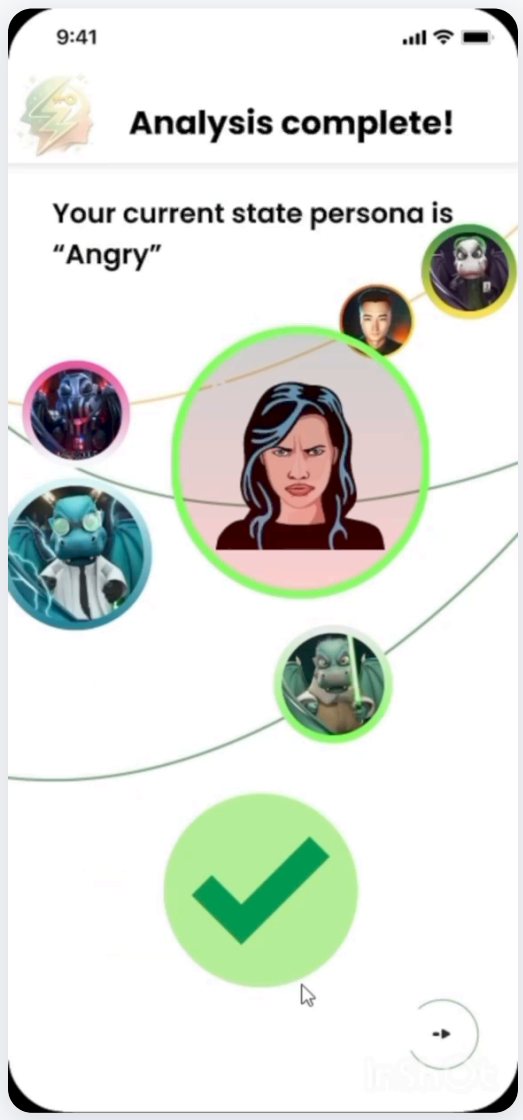

The outcome. Alamein International University adopted the idea and placed Zigo in its new psychological clinic. The project was carried out under the patronage of the university president, the vice president and the deans of the faculties.

CHOOSE A FIELD

MEET YOUR PERSONA

02 · DESIGN PROCESS & UX FLOW

From welcome screen to personal result

The planned journey runs from Sign Up to Choose the Program, Take the Test, Get Results and Start Growth. The screens below cover the core of it: choosing a programme, taking the test and reading the result. Users pick a field, then follow one of two paths: a visual questionnaire for Graphic Design, or a short chess match for Game Design.

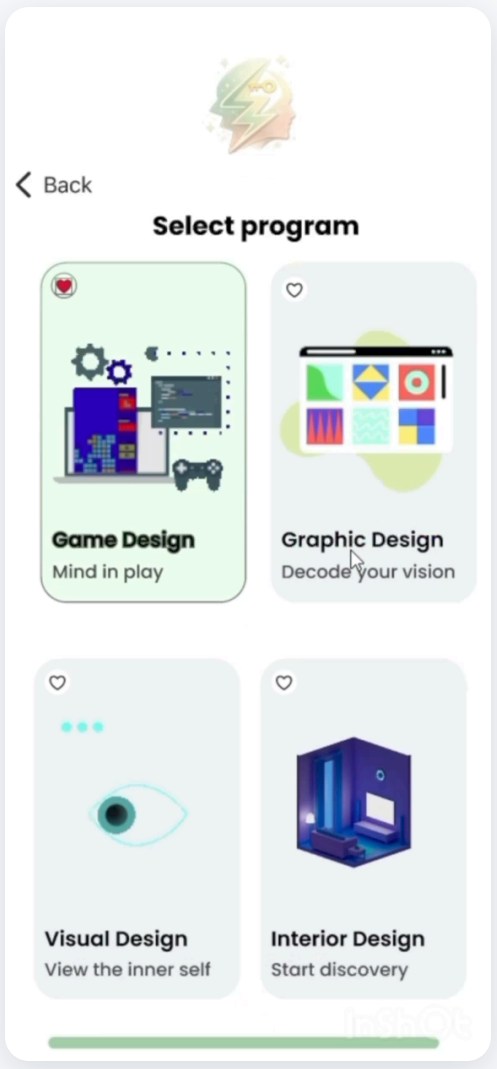

01 · WELCOME

A calm splash screen with a single "Discover" button.

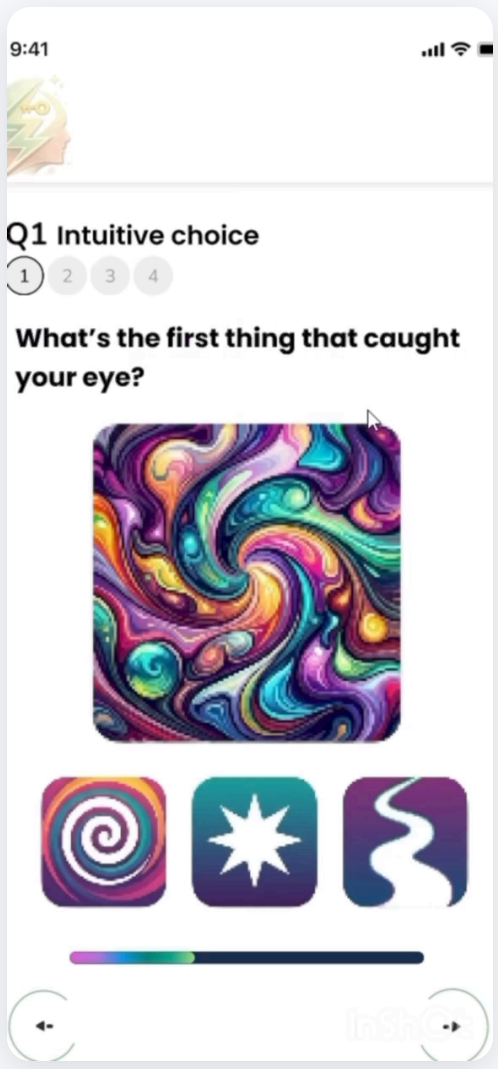

02 · LANGUAGE

Arabic, English, Français and More, in large tappable cards.

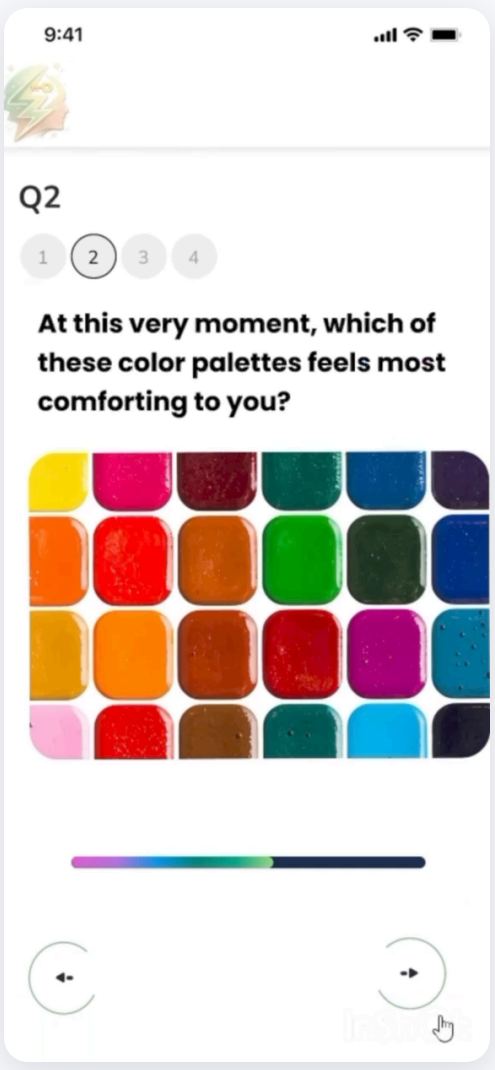

03 · SELECT PROGRAM

Game, Graphic, Visual and Interior Design, each with a one-line promise.

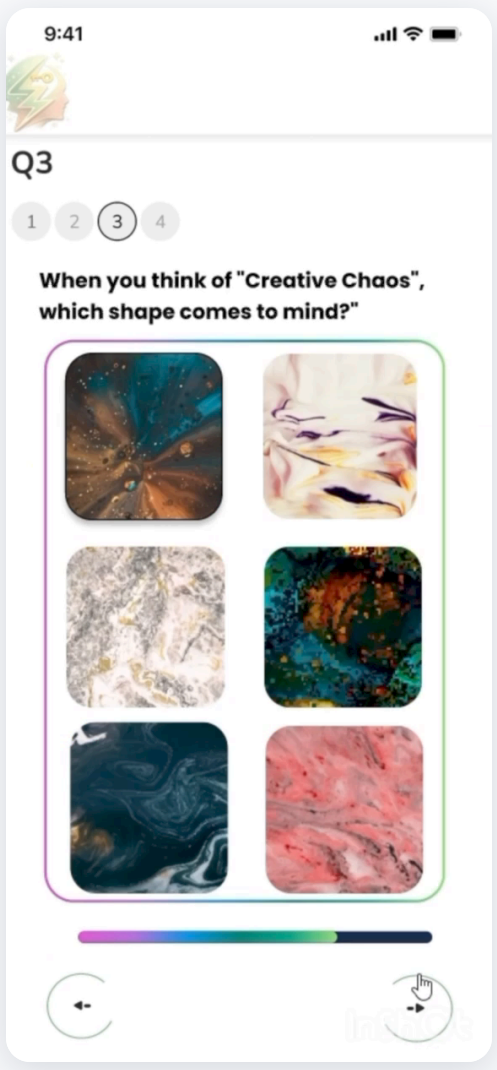

04 · QUESTION 1

"What's the first thing that caught your eye?" An intuitive, image-based choice.

05 · QUESTION 2

Which colour palette feels most comforting at this very moment.

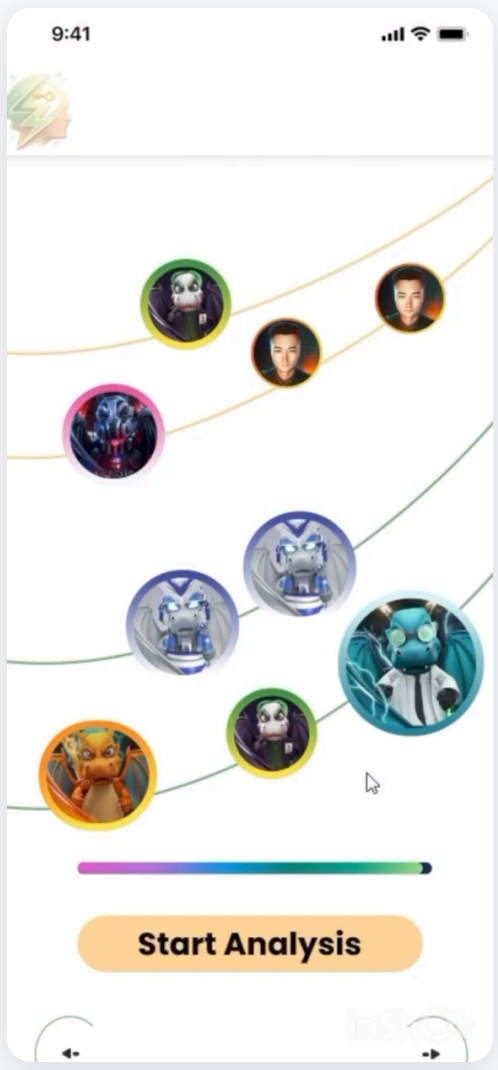

06 · QUESTION 3

"Creative Chaos": which shape comes to mind.

07 · ANALYSIS

A loading screen introduces the behaviour analysis, with a progress percentage.

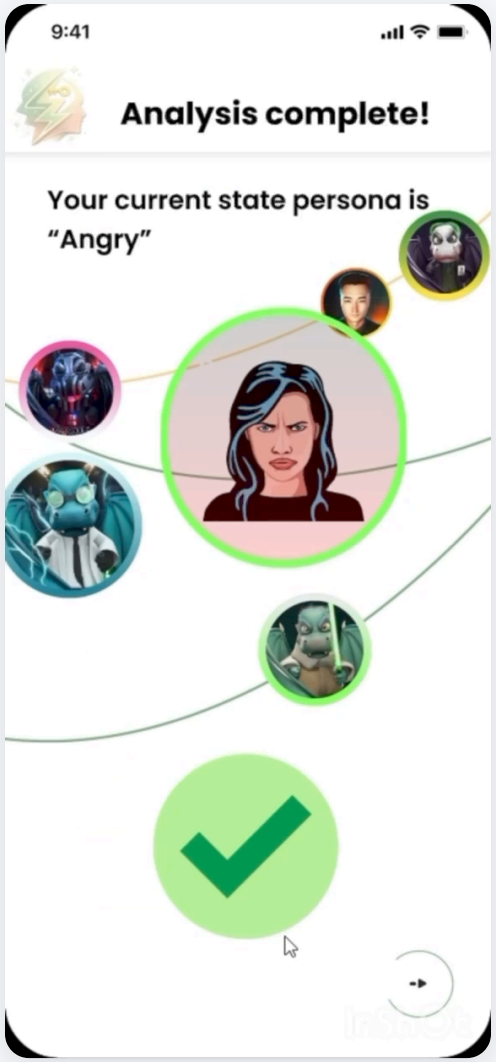

08 · PERSONAS

A gallery of character personas, then "Start Analysis".

TWO PATHS, ONE RESULT

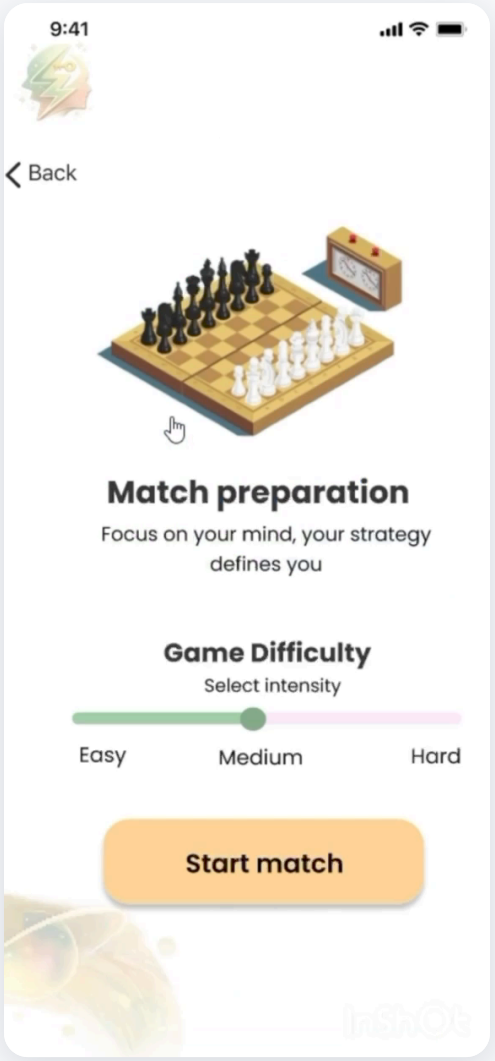

Results that feel personal

Both paths end the same way: a completion screen that names a persona and invites the student to go deeper.

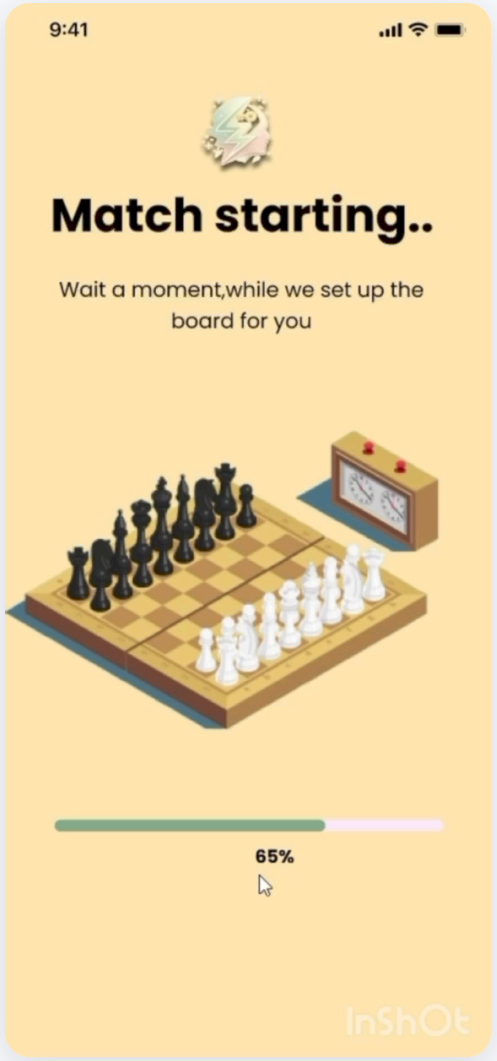

GRAPHIC DESIGN RESULT

"Analysis complete!" with the student's current-state persona and a clear check mark.

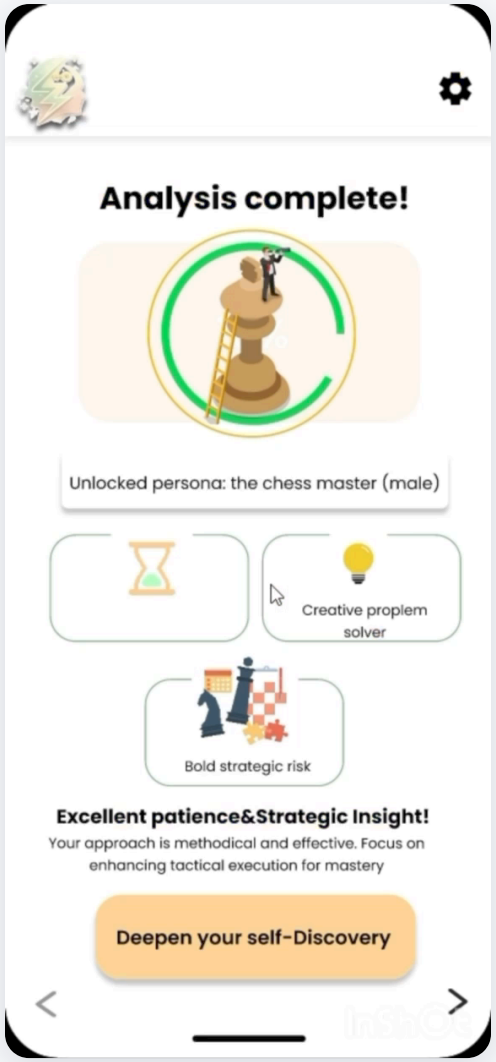

GAME DESIGN · PREPARE

Choose a difficulty: Easy, Medium or Hard.

GAME DESIGN · PLAY

A short wait while the board is set up, with a progress percentage.

GAME DESIGN RESULT

An unlocked persona, key traits and a "Deepen your self-Discovery" call to action.

03 · UX/UI IMPROVEMENTS & SOLUTIONS

A simplified flow with a clear hierarchy

SIMPLIFIED FLOW

One decision per screen, a question counter from 1 to 4, and back and next arrows kept in the same bottom corners throughout.

ORGANISED SPACING

Generous padding, rounded cards and a clean two-by-two grid make the four programmes easy to scan and tap.

CLEAR HIERARCHY

Bold headings, one short supporting line and a single primary button per screen guide the eye in the same order every time.

VISIBLE PROGRESS

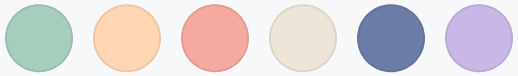

A colour-gradient progress bar, loading percentages and a final check mark show students where they are and when they are done.

WARM, FOCUSED IDENTITY

Minimal distractions and soft pastel colours with friendly illustrations build trust and keep attention on self-discovery.

VISUAL-FIRST QUESTIONS

Images, colours and shapes replace long text, so students answer from intuition rather than from reading.

Sage, peach, coral, sand, slate blue and lavender, set in Poppins

04 · KEY TAKEAWAYS & IMPACT

Built for students, designed for growth

OUTCOME

Adopted by Alamein International University and placed in its new psychological clinic, under the patronage of university leadership.

EXPECTED IMPACT

A short, visual and friendly path is designed to help students understand themselves, make more informed choices about programmes, and keep growing with a clearer sense of purpose.

WHAT I LEARNED

Clear structure and a consistent visual language let a complex idea, behavioural analysis, be understood in seconds.

Relevance to PR & Outreach. This project shows that I can translate a complex idea into a clear visual story, design for a specific audience, and keep a consistent identity across every touchpoint.

PROJECT MATERIALS

Concept and brand boards

Two boards present the Zigo concept: one sets out the identity, journey and interface highlights, and the other presents the app for the Alamein International University community.
